

IP VPN

VIRTUAL & SECURE PRIVATE NETWORKS.
REAL VALUE.

Our customers love the cost-savings, the flexibility, and the promise of worldwide connectivity. When you need to extend your private connectivity services into the Americas, you can depend on us to provide exceptional value.

WHY OUR SOLUTIONS MEET YOUR NEEDS

RESILIENCY

While many other networks rely upon a single network infrastructure, we can run our services on top of any international and terrestrial cable system. This approach allows us to provide customized solutions that fit your specific needs and budget while avoiding any of the inherent limitations of using just one individual backbone.

EXPERTISE

We bring to our customers two decades of experience operating one of the most extensive networks in Latin America. You can be confident that we can satisfy all of your business needs with an unsurpassed combination of regional reach, marketplace knowledge, and business savvy.

REACH

We've built an extensive, pan-regional network that gives blue-chip enterprises a bridge into the local networks of the Caribbean, Central America, Mexico, North America and South America. And we've supplemented this network with a series of extended agreements with key partners throughout Latin America covering all the countries in the region.

SUPPORT

We believe in personal support from dedicated specialists, who intimately know their carrier customers, talk to them often, and carefully monitor their services "around the clock." We even assign two account representatives to every customer, so someone will always be there to provide personal attention when needed. In sum, you'll know our people, and they'll know you.

FEATURES

- IP VPN MPLS based services powered by our award winning Software Defined network.
- Multi-access technology that easily aligns with various types of "last mile" connectivity.
- Private and secure solutions that operate independently from the public Internet.
- Six Quality of Service (QoS) levels for traffic classification, scheduling and priority.
- Bandwidth options: from 1 Mbps to beyond 10 Gbps.
- Competitive Service Level Agreements (SLA) with robust and resilient connectivity options to meet your mission critical needs.
- Customizable options to meet business requirements, including configuration, deployment and management of customer premise equipment (CPE) at your network sites.
- Network redundancy linking our next generation routers with the customer equipment, combining the flexibility of multiple router protocols with maximum back-up protection.
